

## **Students and Student Services**

### **F. Rights, Duties and Responsibilities**

#### **5520 Eye Protection Devices**

In conformance with the Education Code, students shall purchase and wear approved eye protection devices in classrooms and laboratories whenever any hazards to the eyes are likely to exist. Students in classes where hazards exist shall be instructed and tested on safety procedures, including the care and wearing of proper eye protection devices.

Although students are expected to provide their own eye protection devices, each laboratory where any hazards to the eyes are likely to exist will stock sufficient numbers of eye protection devices to be issued to visitors and to students who do not have such devices immediately available. Eye protection devices issued by the college shall be maintained in a manner to insure hygienic conditions.

The College President shall designate the proper type of eye protection devices. These devices shall be made available in the colleges bookstores for sale to students at actual cost.

Those students who find it financially impossible to furnish their own eye protection devices, upon proper application to the College President, will be supplied with those devices by the district.
