

## How to change your Outlook Client Password through Windows 7

\*Note this will also change your password for OWA and your smartphone. Once the change has been made you will be logging on your computer, OWA, and your smartphone with your new password.

1. While logged into your computer through the domain, press **Ctrl + Alt + Delete**
2. Select **“Change a password..”**

3. You will then be asked to enter your **Old password** once and your **New password** twice.
